

# **Control Material CS-MP-SC-1**

# Sr-90 and Cs-137 in Milk Powder

# **General Information**

Intended use

Checking the performance of analytical laboratories engaged in the determination of Sr-90 and Cs-137 in food and other biological samples

# Produced and certified by:

Institute of Nuclear Chemistry and Technology, Dorodna 16 03-195 Warsaw, Poland

#### **Description of the material**

Milk powder commercially available was homogenized by mixing for 15 hrs. in a plastic drum rotated in three directions, distributed into PE bags in portion of ca. 500 g each and firmly covered. All bags were firmly closed and sterilized by electron beam radiation from linear accelerator LA-13 with a dose of 28 kGy. Homogeneity was examined by measuring of activity concentration of Sr-90 and Cs-137 in randomly selected containers. Assigning of reference values for activity concentration was carried out by interlaboratory comparison in which 13 radiochemical laboratories took part.

#### **Determination of moisture content**

In order to express the activity concentration of radionuclides on a dry-weight basis, moisture content should be determined on a separate subsample of 5 g mass by drying in an oven at  $80^{\circ}$ C for 27 hours.

#### Assigning of reference values

Reference values were assigned on the basis of the results provided by several radiochemical laboratories. The radionuclides have to be determined by at least two methods in order to assign reference value. A reference value was calculated using the HISTO software delivered by the IAEA, an uncertainty was evaluated according to ISO 13528:2005 [1], ISO GUM [2] and IUPAC harmonized protocol [3].

Reference values for activity concentration of Sr-90 and Cs-137 in Milk Powder CS-MP-SC-1

Radionuclide	reference value + expanded uncertainty (k=2) $X_{ref} \pm U^{*}$ [Bq kg <sup>-1</sup> dry mass]
Cs-137	$1.146 \pm 0.107$
Sr-90	$0.91 \pm 0.03$

\* on 1 November 2010 for  $^{137}$ Cs and 18 February 2011 for  $^{90}$ Sr

The traceability of this Control Material to the SI units is ensured by the use of certified standard solutions by NPL (the UK's National Measurement Institute) for calibration of measurement equipments.

Long-time stability is monitored during storage. The shelf life of the milk powder material has been established to be 31 December 2020.
